

Invisalign clear aligners with mandibular advancement straighten teeth and move the jaw at the same time.

- Fix your teen's overbite while straightening their teeth. Goodbye metal. Hello Invisalign treatment.

Only Invisalign clear aligners have a precision wing feature.

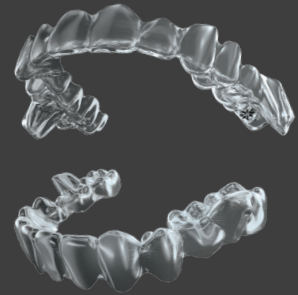

Invisalign clear aligners straighten the teeth while precision wings gradually move the lower jaw forward to grow in the correct position.

As the lower jaw moves forward, the bite improves and the facial profile is enhanced.

The future of your teen's smile.

Complex cases used to take a whole lot of metal and multiple steps. But Invisalign treatment with mandibular advancement can move your teen's jaw while straightening the teeth—without a mouthful of brackets, wires, and bulky metal devices.

Compare Invisalign clear aligners with mandibular advancement to braces and traditional appliances	Invisalign treatment with mandibular advancement	Braces and traditional appliances
Teeth straightening and jaw positioning in one step	●	
No discomfort from bulky metal appliances, wires, or brackets	●	
No bulky appliances to get in the way of brushing and flossing	●	
Works for both simple and complex cases	●	●
May be covered by orthodontic insurance	●	●
Minimal emergency visits for sitting and repairing appliances	●	
Fewer unexpected orthodontist visits	●	

A prescription is required. See your doctor. In rare cases, allergic reactions can occur. Data on file at Align Technology.
